An Overview Of Our System Architecture

- What aspects are client and server responsible for?
- The client is responsible for all the configuration of the web pages, while the server site takes care of processing and handling all the data between the frontend and the database.
- How are you storing and accessing data?
 We used MySQL to store our data and so the Repository accesses data in a MySQL local database on the computer
- Any particular aspects of your design you would like to highlight?

A Retrospective On Your Project Work

- What went well? What difficulties did you encounter?
 Our difficulties were group related, we were not active enough as a group and didn't communicate well enough as a group.
- How did you plan to structure / manage your work? How did that turn out?
 We managed our work badly, we didn't split up assignments or work much together.
 As can be seen, it didn't turn out so great.
- What would you do differently next time?
 We would plan better from the get go how to do things and communicate more and better between ourselves.
- How would you avoid any difficulties you encountered?
 Communication, planning and group work....

What Would We Do Better Next Time?

WHAT HAVE WE LEARNED?

- We needed to start way earlier working on the code as group
- Work closer as a group
- Be more in contact as a group
- Be more constant with meetups as a group

IMPROVEMENTS FOR THE FUTURE

- More communication
- Better communication
- More planning
- Better planning
- More group work
- Better group work

Do You Have Any Questions?

Thanks for listening!
